This slide pack provides results for the following topic areas:

Background, introduction and guidance.....	<u>Slide 3</u>
Overall experience of GP surgeries.....	<u>Slide 8</u>
Access to GP services.....	<u>Slide 13</u>
Making an appointment.....	<u>Slide 20</u>
Waiting times at the GP surgery.....	<u>Slide 30</u>
Perceptions of care at patients’ last GP appointment.....	<u>Slide 33</u>
Perceptions of care at patients’ last nurse appointment.....	<u>Slide 37</u>
Satisfaction with the practice’s opening hours.....	<u>Slide 41</u>
Out-of-hours services.....	<u>Slide 44</u>
Statistical reliability.....	<u>Slide 49</u>
Want to know more?.....	<u>Slide 51</u>

Background, introduction and guidance

Background information about the survey

- The GP Patient Survey (GPPS) is an England-wide survey, providing **practice-level data** about patients' experiences of their GP practices.
- Ipsos MORI administers the survey on behalf of NHS England.
- For more information about the survey please refer to the end of this slide pack or visit <https://gp-patient.co.uk/>.
- This slide pack presents some of the key results for **NHS Bradford Districts CCG**.
- The data in this slide pack are based on the **July 2017 GPPS publication**. In contrast to previous years when the survey was carried out across two waves, the GPPS now consists of a single wave of fieldwork carried out annually, from January 2017 to March 2017. However, the sample size has remained similar, continuing to provide practice-level data.
- In NHS Bradford Districts CCG, **12,256** questionnaires were sent out, and **4,260** were returned completed. This represents a response rate of **35%**.
- Prior to 2015 these slide packs presented Area Team averages for each CCG. These are no longer included following the integration of Area Teams into the four existing Regional Teams. However, CCGs can still see how their results compare to those of other local CCGs.
- **The questionnaire can be found here:** <https://gp-patient.co.uk/surveys-and-reports>. Note the numbering may change each publication due to the addition or removal of questions.

The screenshot shows the 'GP PATIENT SURVEY' interface. At the top, it says 'Ipsos MORI' and 'NHS'. Below that, it says 'GP PATIENT SURVEY'. There is a section for 'Please answer the questions below by putting an X in ONE BOX for each question unless more than one answer is allowed (these questions are clearly marked). We will keep your answers completely confidential.' Below this, there is a section for 'If you would prefer to complete the survey online, please go to www.gp-patient.co.uk/survey'. There are two input fields: 'Reference: 1234567890' and 'Online password: ABCDE'. Below this, there is a section titled 'ACCESSING YOUR GP SERVICES'. It contains several questions with checkboxes. The first question is 'When did you last see or speak to a GP from your GP surgery?'. The options are: 'In the past 3 months', 'Between 3 and 6 months ago', 'Between 6 and 12 months ago', 'More than 12 months ago', 'I have never seen a GP from my GP surgery', and 'None of these'. The second question is 'When did you last see or speak to a nurse from your GP surgery?'. The options are: 'In the past 3 months', 'Between 3 and 6 months ago', 'Between 6 and 12 months ago', 'More than 12 months ago', 'I have never seen a nurse from my GP surgery', and 'None of these'. The third question is 'Generally, how easy is it to get through to someone at your GP surgery on the phone?'. The options are: 'Very easy', 'Fairly easy', 'Not very easy', 'Not at all easy', and 'Haven't tried'. The fourth question is 'How helpful do you find the receptionists at your GP surgery?'. The options are: 'Very helpful', 'Fairly helpful', 'Not very helpful', 'Not at all helpful', and 'Don't know'. The fifth question is 'How do you normally book appointments to see a GP or nurse at your GP surgery?'. The options are: 'In person', 'By phone', 'By fax machine', 'Online', and 'Doesn't apply'. The sixth question is 'As far as you know, which of the following online services does your GP surgery offer?'. The options are: 'By "tablet" we mean one a website or smartphone app', 'Booking appointments online', 'Ordering repeat prescriptions online', 'Accessing my medical records online', and 'Don't know'. The seventh question is 'As far as you know, which of the following online services have you used at your GP surgery?'. The options are: 'Booking appointments online', 'Ordering repeat prescriptions online', 'Accessing my medical records online', and 'None of these'. The eighth question is 'Is there a particular GP you usually prefer to see or speak to?'. The options are: 'Yes', 'No', and 'There is usually only one GP in my GP surgery'. The ninth question is 'How often do you see or speak to the GP you prefer?'. The options are: 'Always or almost always', 'A lot of the time', 'Some of the time', 'Never or almost never', and 'Not tried at this GP surgery'. At the bottom, it says 'page 1' and 'Please turn over'.

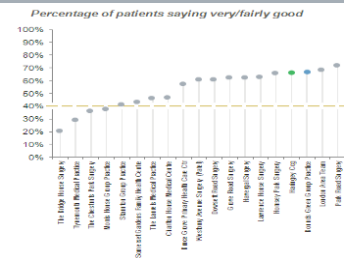

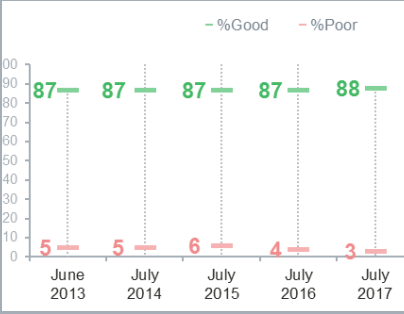

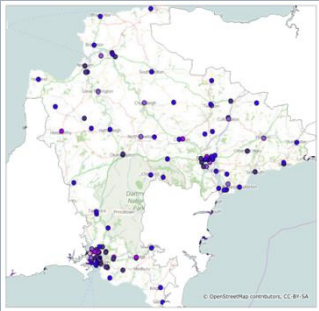

Introduction

- The GP Patient Survey measures patients' experiences across a range of topics, including:
 - Making appointments
 - Waiting times
 - Perceptions of care at appointments
 - Practice opening hours
 - Out-of-hours services
- The GP Patient Survey provides data at practice level using a consistent methodology, which means it is comparable across organisations and over time.
- The survey has limitations:
 - Sample sizes at practice level are relatively small.
 - The survey does not include qualitative data which limits the detail provided by the results.
 - The data are provided once a year rather than in real time.
- However, given the consistency of the survey across organisations and over time, GPPS can be used as one element of evidence.
- It can be triangulated with other sources of feedback, such as feedback from Patient Participation Groups, local surveys and the Friends and Family Test, to develop a fuller picture of patient journeys.
- **This slide pack is intended to assist this triangulation of data. It aims to highlight where there may be a need for further exploration.**
- Practices and CCGs can then discuss the findings further and triangulate them with other data – in order to identify potential improvements and highlight best practice.
- **The following slide suggests ideas for how the data can be used to improve services.**

Guidance on how to use the data

The following suggest ideas for how the data in this slide pack can be used and interpreted to improve GP services:

- Comparison of a CCG's results against the national average:** this allows benchmarking of the results to identify whether the CCG is performing well, poorly, or in line with others. The CCG may wish to focus on areas where it compares less favourably.
- Analysing trends in a CCG's results over time:** this provides a sense of the direction of the CCG's performance over time. The CCG may wish to focus on areas that have seen declines over time.
- Considering questions where there is a larger range in responses among practices or CCGs:** this highlights areas in which greater improvements may be possible, as some CCGs or practices are performing significantly better than others nearby. The CCG may wish to focus on areas with a larger range in the results.
- Comparison of practices' results within a CCG:** this can identify practices within a CCG that seem to be over-performing or under-performing compared with others. The CCG may wish to work with individual practices: those that are performing particularly well may be able to highlight best practice, while those performing less well may be able to improve their performance.

Interpreting the results

- The number of participants answering (the base size) is stated for each question. The total number of responses is shown at the bottom of each chart.
- **All comparisons are indicative only. Differences may not be statistically significant – particularly when comparing practices due to low numbers of responses.**
- For guidance on statistical reliability, or for details of where you can get more information about the survey, please refer to the end of this slide pack.
- **Maps:**
 - CCG and practice-level results are also displayed on maps, with results split across 5 bands (or 'quintiles') in order to have a fairly even distribution at the national level of CCGs/practices across each band.
- **Trends:**
 - **Latest / July 2017:** refers to the **July 2017 publication** (fieldwork January to March 2017).
 - **July 2016:** refers to the **July 2016 publication** (fieldwork July to September 2015 and January to March 2016).
 - **July 2015:** refers to the **July 2015 publication** (fieldwork July to September 2014 and January to March 2015).
 - **July 2014:** refers to the **July 2014 publication** (fieldwork July to September 2013 and January to March 2014).
 - **June 2013:** Refers to the **June 2013 publication** (fieldwork July to September 2012 and January to March 2013).
- For further information on using the data please refer to the end of this slide pack.

More than 0% but less than 0.5%

When fewer than 10 patients respond

In cases where fewer than 10 patients have answered a question, the **data have been suppressed** and results will not appear within the charts. This is to prevent individuals and their responses being identifiable in the data.

100%

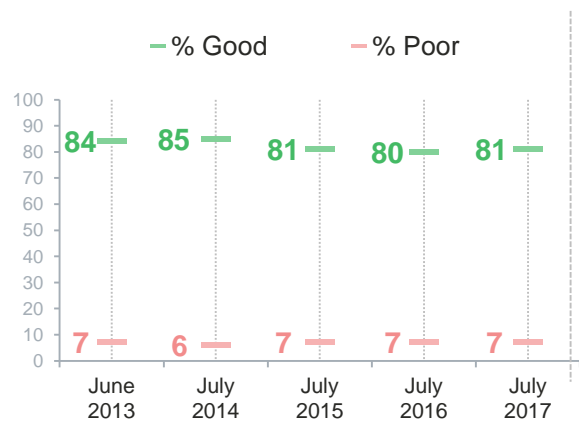

Where results do not sum to 100%, or where individual responses (e.g. fairly good; very good) do not sum to combined responses (e.g. very/fairly good) this is due to **rounding**.

Out-of-hours services*

** The out-of-hours service questions are only asked of those who have recently used an NHS service when they wanted to see a GP but their GP surgery was closed. As such, the base size is often too small to make meaningful comparisons at practice level; practice range within CCG has therefore not been included for these questions.*

Use of out-of-hours services

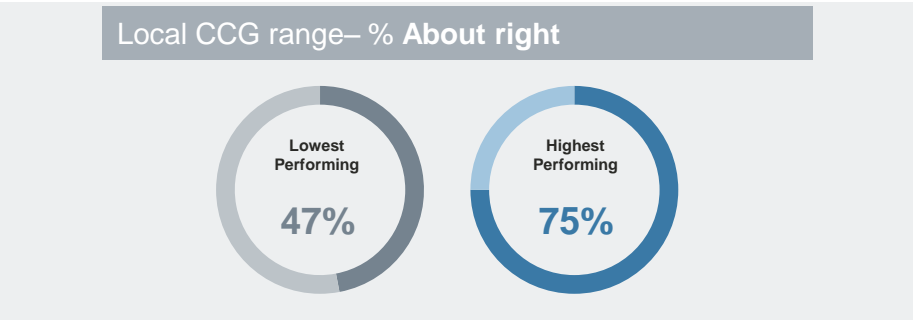

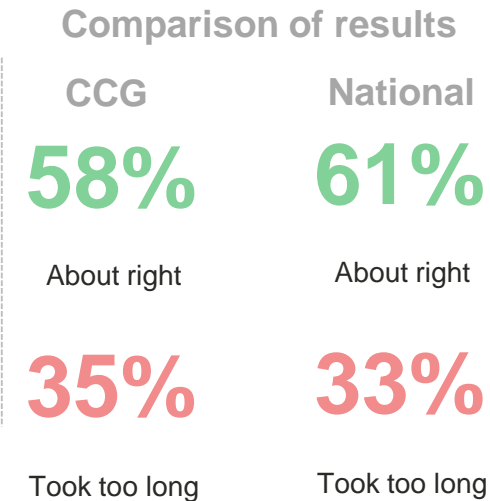

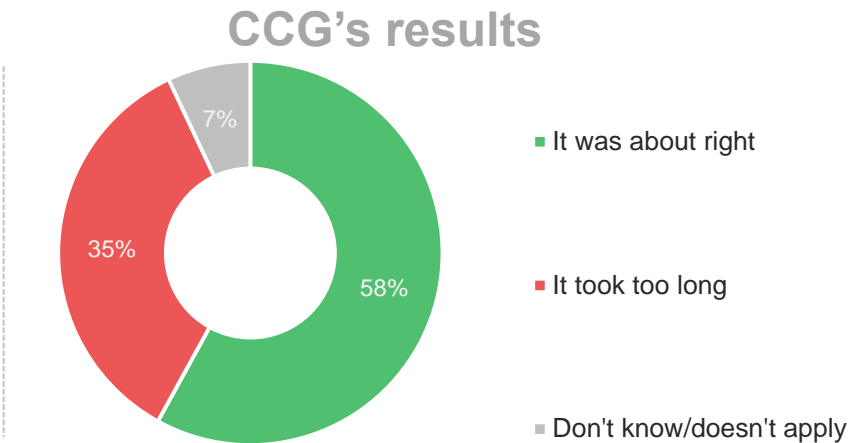

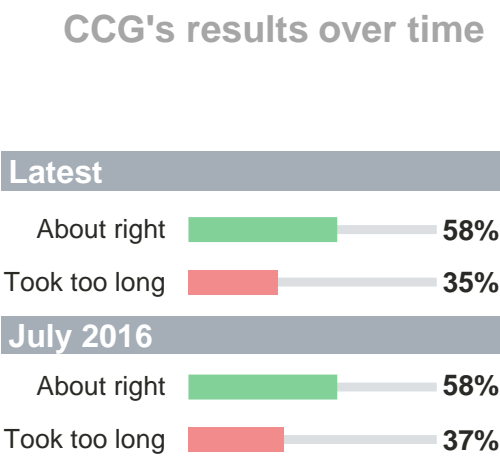

Q41. Considering all of the services you contacted, which of the following happened on that occasion?

Base: All those who tried to contact an NHS service when GP surgery closed in past 6 months: National (124,736); CCG (668)

Speed of care provided by out-of-hours service*

Q42. How do you feel about how quickly you received care or advice on that occasion?

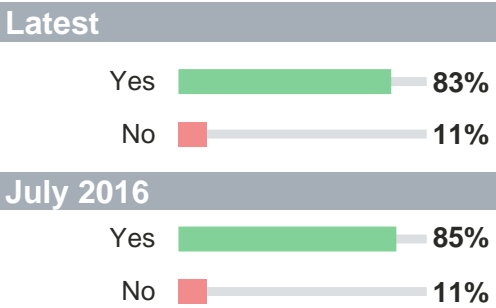

* The out-of-hours questions were redesigned for July-September 2015 fieldwork to reflect changes to service provision. As such, comparisons are only available from July 2016.

Base: All those who tried to contact an NHS service when GP surgery closed in past 6 months: National (124,915); CCG 2017 (672); CCG 2016 (715); CCG bases range from 131 to 1,437

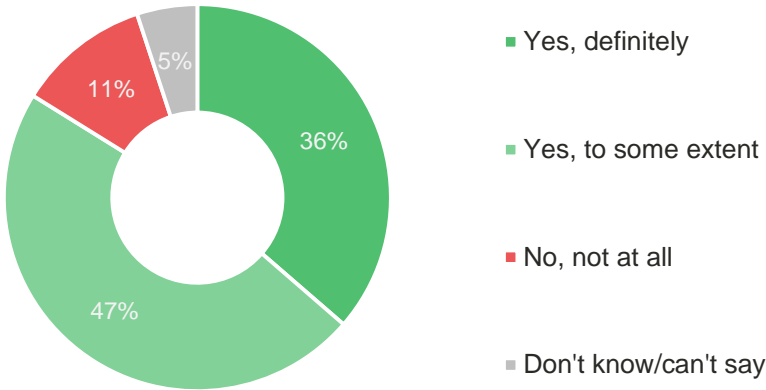

Confidence and trust in out-of-hours staff*

Q43. Considering all of the people you saw or spoke to on that occasion, did you have confidence and trust in them?

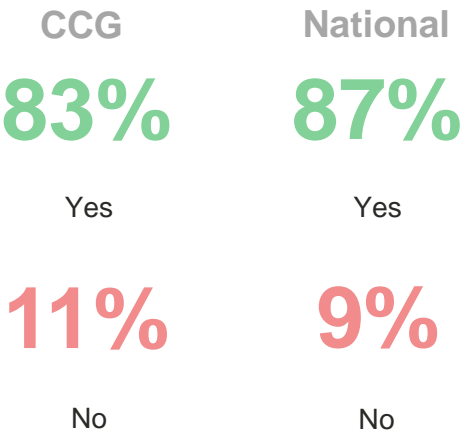

CCG's results over time

%Yes = %Yes, definitely + % Yes, to some extent

Overall experience of out-of-hours services*

Q44. Overall, how would you describe your last experience of NHS services when you wanted to see a GP but your GP surgery was closed?

* The out-of-hours questions were redesigned for July-September 2015 fieldwork to reflect changes to service provision. As such, comparisons are only made with 2016 data.

Base: All answering who have tried to call an out-of-hours GP service in the past 6 months: National (124,994); CCG 2017 (670); CCG 2016 (713); CCG bases range from 131 to 1,429

%Good = %Very good + %Fairly good
%Poor = %Fairly poor + %Very poor

Statistical reliability

Statistical reliability

Participants in a survey such as GPPS represent only a sample of the total population of interest – this means we cannot be certain that the results of a question are exactly the same as if everybody within that population had taken part (“true values”). However, we can predict the variation between the results of a question and the true value by using the size of the sample on which results are based and the number of times a particular answer is given. The confidence with which we make this prediction is usually chosen to be 95% – that is, the chances are 95 in 100 that the true value will fall within a specified range (the “95% confidence interval”).

The table below gives examples of what the confidence intervals look like for an ‘average’ practice and CCG, as well as the confidence intervals at the national level.

An example of confidence intervals (at national, CCG and practice-level) based on the average number of responses to the question “Overall, how would you describe your experience of your GP surgery?”

	Average sample size on which results are based	Approximate confidence intervals for percentages at or near these levels		
		Level 1: 10% or 90%	Level 2: 30% or 70%	Level 3: 50%
		+/-	+/-	+/-
National	808,332	0.09	0.14	0.15
CCG	4,000	1.18	1.86	2.07
Practice	100	5.05	9.41	11.3

For example, taking a CCG where 4,000 people responded and where 30% answered ‘Very good’ in response to ‘Overall, how would you describe your experience of making an appointment’, there is a 95% likelihood that the true value (which would have been obtained if the whole population had been interviewed) will fall within the range of +/-1.86 percentage points from that question’s result (i.e. between 28.14% and 31.86%).

When results are compared between separate groups within a sample, the difference may be “real” or it may occur by chance (because not everyone in the population has been interviewed). Confidence intervals will be wider when comparing groups, especially where there are small numbers e.g. practices where 100 patients or fewer responded to a question. These findings should be regarded as indicative rather than robust.

Further background information about the survey

- The survey was sent to **c.2.15 million adult patients** registered with a GP practice.
- Participants are sent a **postal questionnaire**, also with the option of completing the survey online or via telephone.
- Past results dating back to 2007 are available for every practice in the UK, allowing meaningful comparisons of patients' experiences; the survey is now annual, previously it took place twice a year (June 2011- July 2016), and on a quarterly basis (April 2009 – March 2011) and annually (January 2007 – March 2009).
- For more information about the survey please visit <https://gp-patient.co.uk/>.
- The overall response rate to the survey is **37.5%**, based on **808,332** completed surveys.
- **Weights have been applied** to adjust the data to account for potential age and gender differences between the profile of all eligible patients in a practice and the patients who actually complete a questionnaire. Since the first wave of the 2011-2012 survey the weighting also takes into account neighbourhood statistics, such as levels of deprivation, in order to further improve the reliability of the findings.
- Further information on the survey including: questionnaire design, sampling, communication with patients and practices, data collection, data analysis, response rates and reporting can be found in the technical annex for each survey year, available here: <https://gp-patient.co.uk/SurveysAndReports>

Where to go to do further analysis ...

- For reports which show the National results broken down by CCG and Practice, go to <https://gp-patient.co.uk/SurveysAndReports> - you can also see previous years' results here.
- To analyse the survey data for a specific participant group (e.g. by age), go to http://results.gp-patient.co.uk/report/1/rt1_profiles.aspx
- To break down the survey results by survey question as well as by participant demographics, go to http://results.gp-patient.co.uk/report/6/rt3_result.aspx
- To look at trends in responses and study the survey data by different participant groups, go to http://results.gp-patient.co.uk/report/12/rt1_profiles.aspx
- For general FAQs about the GP Patient Survey, go to <https://gp-patient.co.uk/FAQ>

For further information about the GP Patient Survey, please get in touch with the GPPS team at Ipsos MORI at GPPatientSurvey@Ipsos-MORI.com

We would be interested to hear any feedback you have on this slide pack, so we can make improvements for the next publication.
